

# KonVis-GPSR-Productlevel-Extension

Version: 1.0.2 (2025-01-14)

Manual Version 1.1

Tested with Magento Version:

Magento Community Version 2.4.6-p8

Magento Community Version 2.4.7-p3

## 1. How to install GPSR extension

- Download the files and add them into app/code directory.

- Run the following command in Magento 2 root folder:

...

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:di:compile
```

```
php bin/magento setup:static-content:deploy
```

...

## 2. Functions of the Extension

The Extensions allows to create Blocks for each brand. Magento has a default Attribute for “Manufacturer” (or brand) but this can be replaced by a different one in the configuration

### 2.1 Choose/set your brand Attribute

The Configuration can be found

Adminarea -> Stores -> Configuration-> Tab “KONVIS”-> GPSR

In the drop down menu you can select the right attribute of your store. The Attribute has to be a drop down Attribute.

## 2.2 Manage Brand Blocks

In the Admin area is a new Area “Brand Blocks”. This area gives a overview about the all created Brand Blocks. The Brand Blocks contain the Information which are shown on product level in the store

## 2.3 Create a New Brand Block

Just click on “Add New Brand”. Than a Form opens which allows you to create a new Brand Block.

Important is to select for which Brand this Block should be used. This can be done in The “Brand Data” Section.

The drop down “Brand” shows the values of the Attribute which is selected in your Configuration (

Heading 1 **A.U Maison**

Lorem ipsum dolor sit amet

A.U Maison

## **2.4 If needed set your Brand Attribute**

Depending on your Products you might need to set your Brand Attribute. This means update the correct products so your chosen Brand Attribute has the right values.

## **2.5 Frontend Function – Showing Brand Blocks on Productlevel**

If the product is configured correctly and there is a matching brand block it got shown. The Brand Block is shown below the other Product attributes on productlevel.

If you need to adjust the output please ask your technical magento support to adjust the extensions output. Currently the Code inside the extension needs to be changed and there is no option do change the output via Configuration
